

Conductivity Type Water Level Controller CPLS-1700L

Conductivity level switches are reliable, maintenance-free point level controllers for conductive liquids ($\geq 20 \mu\text{S}/\text{cm}$), utilizing stainless steel probes to detect liquid presence without any moving parts. Ideal for pump control and alarms in tanks/sumps, they operate at low AC voltage, with options for rigid/flexible probes, Standard temperatures up to 120°C , and pressure up to 10 bar, and optionally up to 250°C and pressure up to 20

bar.

Conductivity level switches use a low AC voltage between electrodes to detect the presence of a conductive liquid and are used in applications such as water treatment, sumps, and the food industry. We are offering Various models according to customer requirements with different specifications.
